Put an AI translation agent on duty inside Teams.

> Just add the T&T app to the Teams you already use.
> No mentions, no extra buttons — your usual Send button is what starts the translation.

HOW IT LOOKS IN TEAMS

WHY IT FEELS NATURAL

- ✓ **Nothing new to operate**
  Add it once to a channel or group chat — no setup for individual members.
- ✓ **Both directions, automatically**
  It detects the language and picks the direction, and follows quoted replies.
- ✓ **AI retranslates on request**
  If the nuance feels off, tap **AI-Retranslate** and Claude rewrites it in context.
- ✓ **It keeps the chat tidy**
  Short acknowledgements, and posts with only a URL or emoji, are skipped.

HOW TO START Three steps

1. **Add the app**
   Add T&T to your channel or group chat.
2. **Post as usual**
   Write in Japanese or English and send.
3. **The translation appears**
   It is posted in the same conversation within seconds.
